IAN WABACHA KIMANI

Full-Stack Software Engineer

Nairobi, Kenya · kimaniian273@gmail.com · 0115 605 780

Portfolio: iankimani.me · GitHub: github.com/Ian-Kimani · LinkedIn: linkedin.com/in/ian-wabacha

PROFESSIONAL SUMMARY

Full-stack software engineer who owns features end-to-end: from ambiguous requirements to production-ready front-end, APIs, and data layers. Built and shipped an offline-first ERP (Python desktop + Node.js/PostgreSQL API + React) and a multi-tenant SaaS platform with automated billing. Comfortable with React, Node.js/Express, relational databases, Docker, and Microsoft Azure. Actively use AI coding tools to accelerate development while keeping strong human judgment on architecture and quality. Seeking a role where I can design, build, and ship resilient systems for real clients.

CORE SKILLS

Frontend: React, Vite, Tailwind CSS, responsive & interactive UIs

Backend & APIs: Node.js, Express.js, Prisma ORM, RESTful APIs, JWT, Role-Based Access Control

Languages: JavaScript (ES6+), Python, SQL, Bash, C++ (Arduino)

Databases: PostgreSQL, SQLite, multi-tenant schema design, relational modelling

Cloud & DevOps: Microsoft Azure, Docker, Docker Compose, Git/GitHub, CI/CD concepts

Practices: Clean code, modular design, background jobs, offline-first & sync patterns, AI-assisted development

Hardware / IoT: PySerial, serial communication, weighing scale & thermal printer integration

PROJECTS

Kahawa Manager — Founder & Lead Software Engineer

Offline-first ERP for Kenyan coffee factories | 2025 – Present

Owned the full product lifecycle after field research with coffee societies and factory managers.

- Designed and built an offline-first Python/CustomTkinter + SQLite desktop application so clerks can weigh coffee and print receipts during internet outages.
- Integrated digital weighing scales and USB thermal printers via PySerial, removing manual data-entry errors.
- Architected a background synchronization engine (timestamp + last-write-wins) that safely pushes only new records to the cloud.
- Implemented a Node.js + PostgreSQL REST API with JWT authentication and strict multi-tenant Role-Based Access Control.
- Delivered a React dashboard with delivery tracking, seasonal performance heatmaps, and PDF/CSV exports for stakeholders.
- Added end-of-season payment processing (bank CSV) and Africa's Talking SMS receipts with a retry queue for unreliable networks.

Miliqo — Full-Stack Software Engineer

Multi-tenant Property Management SaaS | 2026

Owned design and implementation of a complete SaaS platform for landlords.

- Modelled a multi-tenant PostgreSQL schema with Prisma covering properties, units, tenants, and historical occupancy.
- Built an automated billing engine that generates invoices, calculates arrears, and applies credit balances.
- Implemented accurate utility sub-metering that distributes master water/electricity bills across individual tenant meters.
- Enforced strict data isolation via backend middleware so each landlord only accesses their own records.
- Generated print-ready rent and utility invoices with PDFKit.

EDUCATION

Bachelor of Science in Mathematics & Computer Science — Kenyatta University

Relevant coursework: Object-Oriented Programming, Data Structures & Algorithms, Database Systems, Human-Computer Interaction

CERTIFICATIONS

- Microsoft Azure Fundamentals (AZ-900) – Microsoft
- Introduction to Artificial Intelligence – IBM
- AI Fundamentals – PLP Academy
- Universal Acceptance Day 2026 – ICANN / USIU
